

VitaLink Plant Nutrition

VitaLink easy

An advanced one-part hydro nutrient

VitaLink easy gives you simple growing, with great plant results. Ideal whether you are a new or experienced grower looking for low-maintenance growing.

The Benefits

- Scientifically proven to contain everything your plants need in one bottle.
- Reduced pH fluctuations in your tank/reservoir.
- Based on phosphite/phosphate for maximum growth and yield.
- Proven to reduce the risk of plant disease.
- Better overall plant health and development.

FOR HYDROPONICS

How does VitaLink easy work?

VitaLink easy takes the work out of your growing and reduces the risk of mixing errors, whilst allowing you to achieve excellent plant results. Unlike a two-part nutrient that requires two bottles during the growth stage and two bottles during the bloom stage, with VitaLink easy you only need one bottle for each stage of growth. VitaLink easy is superior to other one-part nutrients because it is based on a unique phosphite/phosphate formula, which is proven to boost growth and yield and was developed with a leading UK university.

- **Unique binding compound enables everything your plants need to be supplied in one bottle.**
Most plant nutrients have to be separated into two bottles, known as a two-part A&B nutrient. Your plants require calcium, sulphate and phosphate for a successful life cycle. Calcium has a tendency to react with sulphate and phosphate, which is why with a two-part A&B nutrient, calcium is put in one bottle and sulphate and phosphate in another. However, VitaLink has worked with a leading UK university to develop a unique binding compound that allows all of these essential elements to be supplied in one bottle, so with VitaLink easy there is no mixing of bottles or messing, just great plant growth, health and yield.
- **Unique binding compound reduces pH fluctuations in your tank/reservoir.**
VitaLink easy gives you great plant results, with simpler growing. This is because the unique binding compound is proven to stabilise pH fluctuations in your nutrient tank, which means less pH monitoring and adjusting for you. Many growers want the fast growth and large yield a hydroponic system delivers, but find pH monitoring and

adjusting too difficult and time consuming. VitaLink easy is the answer to this problem!

- **Phosphite for faster growth and maximum yield.**
The key ingredient in VitaLink easy is phosphite, which is a superior form of phosphorus, essential for successful plant development. Other brands supply phosphorus as phosphate. Phosphite is absorbed much more easily than phosphate because it is made up of three oxygen atoms, whereas phosphate is made up of four. VitaLink easy contains the perfect balance of phosphite and phosphate in a ratio that is scientifically proven to boost growth and yield!
- **Phosphite is proven to reduce the risk of plant disease.**
Extensive studies prove that phosphite is able to reduce the risk of root disease, such as Pythium and Phytophthora. This is because phosphite stimulates your plant's own pathogen (defence) mechanisms, which will help to stop it getting sick. VitaLink easy contains both phosphite and Vitamin B1, which increases your plant's defence mechanism.
- **Cobalt and nickel for better overall plant health and development.**
The importance of cobalt and nickel are often not understood and/or overlooked by a lot of growers. However, university studies have shown that both of these microelements have an extremely beneficial effect on your plant's health and development, which is why they are both in VitaLink easy!

VitaLink easy is suitable for use with clay pebbles, perlite and rockwool. It can be used with recirculating and run-to-waste hydroponic systems.

The VitaLink easy grow chart also shows you how to use VitaLink Add-it, our highly effective and popular nutrient additive and growth enhancer range, to maximise your yield.

VitaLink easy Grow Chart

	DURATION	EASY GROW	EASY BLOOM	PLANTSTART	BIOPPLUS	BIOPAC	FULVIC	FOLIAR	BUDDY	FLUSH
Propagation Stage 1 Pre-Soaking Plugs	0-21 Days	-	-	3-4 ml/L CF 6-8	2 ml/L	25 ml/L ONCE	-	-	-	-
Propagation Stage 2 Rooted Cuttings/Seedlings	1-3 Weeks	2-4 ml/L CF 7-12	-	-	2 ml/L	25 ml/L ONCE	-	-	-	-
Vegetative Stage 1 Establishment Period	1-2 Weeks	2-4 ml/L CF 7-12	-	-	1 ml/10L	3 ml/10L	2 ml/L	100 ml/L*	-	-
Vegetative Stage 2 Aggressive Growth	1-2 Weeks	4-8 ml/L CF 12-24	-	-	1 ml/10L	3 ml/10L	2 ml/L	100 ml/L*	-	-
Reproductive Stage 1 Aggressive Growth And First Sign Of Flowers Appearing	1-2 Weeks	-	4-8 ml/L CF 12-24	-	1 ml/10L	3 ml/10L	2 ml/L	100 ml/L*	-	-
Reproductive Stage 2 Growth Slows And Small Flowers/Fruit Develop	2 Weeks	-	4-8 ml/L CF 12-24	-	1 ml/10L	3 ml/10L	2 ml/L	100 ml/L*	-	-
Reproductive Stage 3 Growth Stops And Flowers/ Fruit Expand In Size	2-3 Weeks	-	4-6 ml/L CF 12-18	-	1 ml/10L	3 ml/10L	2 ml/L	100 ml/L*	1 ml/L	-
Reproductive Stage 4 Flowers/Fruit Ripen	1-2 Weeks	-	-	-	1 ml/10L	3 ml/10L	-	-	-	5 ml/L

*FOLIAR SHOULD BE APPLIED ONCE WEEKLY UNDER LOW LIGHT LEVELS

easy GROW Soft Water NPK 2.7/0.6/3.1 (N:P₂O₅:K₂O 2.7/1.3/3.8)
 easy GROW Hard Water NPK 2.7/0.6/3.1 (N:P₂O₅:K₂O 2.7/1.3/3.8)
 easy BLOOM Soft Water NPK 2.5/0.9/4.0 (N:P₂O₅:K₂O 2.5/2.0/4.8)
 easy BLOOM Hard Water NPK 2.5/0.9/4.0 (N:P₂O₅:K₂O 2.5/2.0/4.8)

Ask our Research Scientist a question...

Q. How do you get all of the nutrients my plants need into one bottle?

A. VitaLink easy is created using a unique manufacturing process to provide your plants with all of the nutrients they need for excellent growth and yield in one bottle. Your plants require many elements including some such as calcium, phosphate and sulphate for successful plant development. However, calcium can react with sulphate and phosphate, resulting in nutrient lock-out. This is why calcium has tended to be put into a separate bottle from phosphate and sulphate by most nutrient manufacturers in the past. However, VitaLink uses a unique binding ingredient that is scientifically proven to combine all three nutrients, without the risk of nutrient lock-out. This is why VitaLink easy gives you complete convenience and great plants from one bottle.

Q. When should I switch from a 'growth' to a 'bloom' nutrient?

A. If you are a beginner, we would recommend keeping it simple and changing your nutrient when you change your light cycle to 12 hours. However, experienced growers, who know how to 'read' their plants can change their nutrient two weeks into the 12 hour cycle.
